SUMMARY

Senior Frontend Engineer with 5+ years of experience building scalable, high-performance web applications using React.js, Next.js and TypeScript. Experienced in designing frontend architecture, reusable component systems, role-based applications and data-intensive dashboards across fintech, proptech and SaaS domains. Strong expertise in performance optimization, REST API integration, accessibility, automated testing and modern frontend development workflows, with hands-on full-stack experience using Node.js, Bun and PostgreSQL.

EXPERIENCE

Software Workshop, Mumbai

Aug 2022 – Present

Senior Frontend Engineer | Assivo

- Led end-to-end delivery of enterprise workflow modules for Assivo, delivering core platform domain systems including User, Project, Vendor, Contract, Milestone (Project/Contract) and Manpower Management, from initial design through production deployment.
- Designed scalable frontend architecture and global State Management systems using React.js, Redux Toolkit, TypeScript, TanStack Router and Tailwind CSS to build reusable enterprise component systems.
- Leveraged TanStack Query for server state management with intelligent caching, background refetching and optimistic updates, reducing duplicate API requests by 40% and improving data-fetching performance.
- Streamlined rendering behavior and application responsiveness across complex data tables by implementing React memoization, route-level code splitting and dynamic component loading.
- Engineered high-performance backend APIs using Elysia.js, Bun, Node.js ecosystem, Drizzle ORM and PostgreSQL to support real-time enterprise workflows and accelerate feature delivery.
- Configured automated CI/CD pipelines using GitHub Actions for build validation, testing suites and seamless deployment workflows.

Associate Frontend Developer | Kotak 811 | Homesharp | Terrasharp

- Architected custom Mapbox layer lifecycle methods with data clustering and interactive hover tooltips to dynamically add, remove and toggle 100,000+ data points across 15+ domain layers, including CTS/FP, NOCAS building heights, Wards, Tenders, Mumbai Metro Network and MahaRERA projects, optimizing render performance for high-density spatial visualization.
- Re-architected customer onboarding platforms into modular Next.js App Router projects across ACQI, NTB, ETB, standalone, KYC and VKYC journeys, engineering 50+ reusable UI components to improve consistency and development efficiency.
- Delivered enterprise platforms spanning fintech and proptech domains using Next.js, SvelteKit, TypeScript and Tailwind CSS, building workflow-driven dashboards, onboarding journeys and reporting modules.
- Integrated RESTful APIs, implemented role-based access control (RBAC) and field-level validation, and built CMS-driven workflows using Directus and Prismic.
- Elevated server-side rendering, asset delivery and frontend performance through React memoization (useMemo, useCallback, React.memo), dynamic code splitting and lazy loading, reducing initial page load time by up to 35% and improving Lighthouse performance scores into the 90+ range.
- Collaborated closely with backend teams on API contracts and secure data integrations to deliver business-critical fintech and proptech features.

Eleva Infotech, Bangalore

Jul 2021 – Jul 2022

Frontend Developer | Postik

- Developed responsive React.js applications for a restaurant POS platform covering order management, billing, menu administration and outlet operations.
- Worked on POS workflows supporting 20+ restaurant tables, covering table management, order creation, order updates, billing and kitchen operations.
- Implemented Redux for centralized management of order, billing, menu and outlet data across restaurant operations.
- Built role-based workflows for Owners, Managers, Waiters and Chefs, supporting the complete restaurant order lifecycle.
- Created REST APIs using Express.js and implemented CRUD operations for restaurant, menu, table, order and outlet management.
- Developed reusable UI components and integrated frontend applications with REST APIs to deliver scalable and maintainable solutions.

PROJECTS

Servora: Full-Stack Restaurant OS (Solo Project)

React.js · Next.js · TypeScript · Elysia.js · Bun · PostgreSQL · Redis

Demo: Website · Admin/POS · Kitchen · Waiter · Customer | GitHub

- Designed and built a 6-application restaurant operating system as a Turborepo/Bun monorepo - POS/admin web, kitchen display, waiter app, customer QR ordering, marketing site, and backend API - sharing 6 internal packages (types, validation, UI, API client, realtime, config) across a 12-workspace codebase.
- Engineered the backend on Elysia.js, Bun, Drizzle ORM and PostgreSQL with Redis caching to support real-time order and kitchen workflows across staff-facing apps.
- Designed multi-tenant RBAC across 9 system roles with route-level authorization, tenant and branch isolation, JWT audience binding, per-app HttpOnly refresh cookies, CORS controls, rate limiting, input validation and security headers.
- Built and maintained a 900+ test suite (Vitest + Playwright) across 313 files spanning API, RBAC and UI layers, with clean TypeScript compilation across all 12 workspaces and zero lint violations, deploying all six apps independently via Vercel, Render, Neon and Upstash.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, SvelteKit, Redux Toolkit, TanStack Query, TanStack Router, React Hook Form, Tailwind CSS, Vite, Webpack

Backend: Node.js, Bun, Elysia.js, REST APIs, Drizzle ORM, OpenAPI/Swagger, PostgreSQL, Redis

Architecture: Frontend Architecture, Monorepo, Turborepo, SSR, CSR, SSG, RBAC, Authentication, Layered Architecture, Reusable Component Systems

Performance & Accessibility: Core Web Vitals, Code Splitting, Lazy Loading, React Optimization, WCAG, ARIA, Responsive Design

Visualization & CMS: Mapbox, Google Maps, Chart.js, Directus, Prismic

Testing & DevOps: Vitest, Playwright, GitHub Actions, Docker, Git/GitHub, CI/CD

Security: OWASP Security Practices, JWT Authentication, HttpOnly Cookies, CORS, Input Validation, Security Headers

EDUCATION

B.Tech in Applied Electronics and Instrumentation Engineering	2017 – 2021
<i>Asansol Engineering College, Asansol, West Bengal</i>
